Number of TB Cases by Age at Diagnosis and Country of Origin 2007-2011

*Rate per 100,000 persons. Rates calculated on events <20 are considered statistically unreliable and should be interpreted with caution. Rates are not calculated for counties with fewer than 5 cases due to instability of the rate calculation.

Note: All data in this report is based upon information provided to the New Hampshire Department of Health and Human Services under specific legislative authority. The numbers reported may represent an underestimate of the true absolute number and incidence rate of cases in the state. All population calculations and rates (per 100,000) are based on the most recent published estimates by the US Bureau of the Census and the NH Office of State Planning. Any release of personal identifying information is conditioned upon such information remaining confidential. The unauthorized disclosure of any confidential medical or scientific data is a misdemeanor under New Hampshire law. The department is not responsible for any duplication or misrepresentation of surveillance data released in accordance with this guideline. County is based upon residence at the time of disease diagnosis and includes no additional information regarding exposure location.
